CREST ERP Product Engineering

Effortless Reporting with **BIRT Viewer & Scheduler!**

Experience seamless reporting with our enhanced BIRT Viewer and Scheduler! Preview reports directly in the viewer before downloading and automate report generation with ease using the scheduler. Stay updated effortlessly with email notifications when your reports are ready—saving time and keeping you informed.

Streamlining Subcontracting: **One Order, Multiple Possibilities!**

We've enhanced our subcontracting process to make it more efficient than ever! Now, raw materials for manufacturing multiple finished goods can be clubbed into a single subcontracting order. This streamlines raw material issuance, simplifies goods receipt, & makes invoicing faster and more convenient saving you time and effort!

Simplified Work-center Reporting: **One Window, Many Updates!**

Managing production orders is now faster & more efficient! Users can update quantities for multiple finished goods from a single, streamlined interface. Powered by an elegant Flutter design, this enhancement connects seamlessly to CREST ERP services via API, automatically updating all relevant production orders—saving time & reducing effort compared to the earlier one-by-one process.

Dual UOM Tracking: **Smarter Stock Management!**

We've enhanced stock management with dual UOM tracking! The system now supports both primary & secondary stock UOMs, offering improved visibility and control. Both UOMs are displayed on-screen, ensuring seamless & efficient stock handling, especially in Stores & Manufacturing shop floor.

Extension of Backflush Functionality in CREST ERP

This enhancement is designed to better manage excess finished goods produced during work orders. By utilizing a configuration option in the Bill of Materials (BOM), this feature allows for improved control over material consumption and helps accurately determine the actual manufacturing costs. This advancement will enable our users to optimize their production processes and enhance overall efficiency.

Enhanced Financial Reporting

View financial reports in both transaction & base currencies for greater clarity and flexible analysis.

Quote Profitability Feature in Sales Quote Screen

We are pleased to introduce the Quote Profitability feature in the Sales Quote screen, which offers valuable insights into the profitability of your quotes:

- **View Profitability:** Users can easily access sales quote profitability directly from the screen.
- **User Access Control:** The hyperlink is managed through user access permissions, ensuring secure and appropriate access.
- **Detailed Breakdown:** By clicking the link, users can view item-wise profitability, calculated based on cost and markup.

This enhancement empowers users to make more informed decisions with greater transparency in their sales processes.

Technology enhancements

- **Advanced Security & Encryption:** Strengthened security features & modern encryption standards to protect sensitive data.
- **Upgraded Technology Stack:** Compatibility with Java 11 for improved performance, enhanced features, & extended support.
- **Boosted Performance:** Optimized database queries, enhanced cache management, & scalability for handling large datasets & high-concurrency environments.
- **Stability and Reliability:** Resolved bugs from previous versions, resulting in a more robust & dependable system.

Coming Soon (Q4-FY25)

The All-New CREST ERP UI!

A modern design with a fresh, sleek look and enhanced navigation. Intuitive icons for menus and submenus, improving user experience and boosting productivity.

Create BOMs for batch/lot quantities to support more flexible and precise manufacturing planning. This enhancement ensures better raw material planning, especially when raw materials involve decimals.

Batch/Lot Quantity in BOM for CREST ERP!

Alternate Items in BOM for CREST ERP!

Assign alternate items for raw materials in your BOM. If the primary item is unavailable, seamlessly switch to its alternate, reducing production delays and optimizing resource utilization.

Add new fields to existing screens without the need for development, allowing you to tailor the system to your business needs and improve efficiency.

Add Fields to Existing Screens

Alternate Items in BOM for CREST ERP!

A global search feature on the home screen to quickly search for specific transaction numbers or transactions tied to a process. This enhances navigation and streamlines your workflow.

Key Client Success Story

Jolaks Manufacturing Company, Sierra Leone's leading producer of palm oil & soap, operates a state-of-the-art facility with a production capacity of 9,000 MT per month. Despite their robust operations & a strong presence across 15+ ECOWAS nations, Jolaks faced challenges in production forecasting, oil stock management, & intercompany financial transactions, leading to inefficiencies & financial discrepancies. These issues impacted their ability to maintain seamless operations & achieve optimal profitability.

With CREST ERP, Jolaks transformed their processes through modules tailored to manufacturing, quality control, & finance. The solution enabled accurate production forecasting, real-time oil utilization tracking, automated reconciliation of shipment discrepancies, & streamlined intercompany order & financial workflows. These improvements resulted in enhanced efficiency, reduced operational costs, & greater visibility into profitability, empowering Jolaks to maintain their leadership in the region with confidence.

Jolaks – Palm oil Refinery Company

AZA Fashions

Aza Fashions, a leader in luxury fashion, enhanced its manufacturing efficiency with CREST ERP. Before the implementation, fragmented workflows, manual data management, & inventory challenges hampered operations & scalability.

CREST ERP streamlined processes, offering stage-wise stock visibility, automated manufacturing accounting, and real-time insights. The Job Work module played a key role in improving subcontractor coordination & cost management.

The results included improved efficiency, enhanced visibility, & significant cost savings. Automated workflows reduced errors and freed up resources, while real-time tracking enabled data-driven decisions. This transformation reinforced Aza Fashions' position as a luxury fashion leader, blending innovation with excellence.

Partnership

Partnered with Alghanim technologies, Kuwait which is a part of Fouad Alghanim & Sons group to promote CREST ERP in Kuwait, Saudi Arabia, Oman & Qatar

Partnered with Akshay Software Technologies Ltd., a trusted IT solutions provider since 1987, to offer advanced ERP solutions across India & MEA markets, driving business success.
